## **DETAILED ACTION**

### ***Allowable Subject Matter***

Prosecution on the merits of this application is reopened on claims 1, and 3-27, now considered unpatentable for the reasons indicated below:

The indicated allowability of claims 1, and 3-27 is withdrawn in view of the newly discovered reference(s) to Ibegazene et al (La Recherche Aerospatiale, 1994). Rejections based on the newly cited reference(s) follow.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Ibegazene et al (La Recherche Aerospatiale, 1994). Ibegazene teaches a thermal barrier coating for a turbine blade or vane comprising an MCrAlY bond coat, and a ceramic top coat. The ceramic top coat comprises zirconia, hafnia, and yttria. The zirconia may be present in an amount of 100-x, and the hafnia is present in an amount x, wherein x is 25 or 50 mol%, and the material and is partially stabilized with 4.53 mol% yttria. When x = 50mol%, the material has a content of 34.5 wt% zirconia, 59.5 wt% Hafnia, and 6.0 wt% yttria. This range falls directly within the ranges of the instant claims. The characteristics such as conductivity would be expected to be commensurate, as the material is substantially identical.
